Strategic Management Vision

Engineering Safety & Security

VISION
A safe, healthful and secure environment for Engineering academics, research and service, based on prevention, conservation, stewardship, resilience and sustainability.

MISSION
Promote a culture of safety among Aggie Engineering faculty, staff, administration and students, which will be reflected in increased awareness, reduced risk, and safe, sustainable and resilient Engineering practices as the employees and students take their places in industry, academia and research.

GOALS
To be the advocate for the safe, healthful and secure workplace for Engineering academics, research and service to the Aggie community.

To assess Engineering projects, activities, operations and facilities to (i) identify hazards, (ii) assess the risks of such hazards, and (iii) utilize findings to determine appropriate control strategies to reduce risk to acceptable levels in support of safe and successful academic and research outcomes.

Provide consultation, technical services and managerial services to the Aggie Engineering Program, TEES and the Look College of Engineering in the disciplines of Environmental Health, Safety & Security.

Promote Excellence in Higher Education Safety, including increased Awareness and Safe Work Practices (SWP’s) throughout the Aggie Engineering Program, in support of the TEES, TAMU & TAMUS missions.

FOCUS
Our focus is on our most valuable resource, our people — our employees, faculty, researchers, students and visitors — and on providing customer service excellence through hazard identification, risk reduction, increased awareness, responsive service and reasonable compliance, in a proactive, participative, problem-solving environment.

HISTORY
Engineering Safety & Security was established in Fall 1999, and is based on the Engineering Safety Plan document promulgated by our Engineering Safety Council in 1996.
